

Medical Case Report – Cardiology Patient Study

Patient Information

Patient Name: John Matthews
Age: 58
Gender: Male
Medical Record ID: MCI-2026-1045
Admission Date: 2026-03-11

Chief Complaint

The patient presented with chest pain, shortness of breath, fatigue, and dizziness persisting for three days.

Medical History

History of hypertension, Type 2 Diabetes Mellitus, and high cholesterol. The patient has a family history of cardiovascular disease.

Clinical Findings

Blood pressure: 165/102 mmHg
Heart rate: 108 bpm
Elevated troponin levels detected.
ECG showed irregular ST-segment elevation.

Diagnostic Tests

- ECG Test
- Cardiac MRI
- Blood Troponin Test
- Echocardiogram

Diagnosis

Acute Myocardial Infarction (Heart Attack) with secondary complications related to uncontrolled hypertension.

Treatment Plan

- Aspirin 75mg daily
- Atorvastatin 20mg daily
- Metformin 500mg twice daily
- Emergency angioplasty performed

- Cardiac rehabilitation recommended

Follow-up Recommendations

Patient should attend cardiology follow-up visits every 30 days. Lifestyle modifications including low-sodium diet, regular exercise, and smoking cessation were strongly advised.

Discharge Summary

The patient responded positively to treatment and was discharged in stable condition after 5 days of observation.
